(Lens is optional.)

MODEL KY-F50

Thank you for purchasing the JVC KY-F50 Color Video Camera.

To make the most of your new camera's many advanced features, please read this booklet carefully.

JVC does not guarantee the contents of a recording if the color video camera, VCR, or video cassette malfunctions during recording.

SPECIFICATIONS	33

FEATURES

• High-performance 3-CCD camera

Thanks to a newly developed 1/3-inch 440,000 pixel CCD with on-chip lens, the KY-F50 delivers a superb, high-quality picture with an S/N ratio of 58 dB and sensitivity as high as 2000 lux at F10. High-precision bonding technology and new circuitry incorporated in the CCD assure horizontal resolution of 700 lines.

• Compact, lightweight camera with C mount

Weighing a mere 870 grams, the KY-F50's remarkably compact, lightweight design has been made possible by the incorporation of a newly developed IC, 1/3-inch optical system, and bayonet mount.

• Comprehensive functions

- Automatic functions including ALC, EEI and FAW.
- Remote control signal input connector for the optional remote control unit (RM-LP55)

• Comprehensive signal outputs

- Composite video signal (D-SUB9-pin, BNC)
- Y/C443 signal (D-SUB9-pin)
- R/G/B signal (D-SUB9-pin)
- Component signal (D-SUB9-pin)
- Composite sync signal (D-SUB9-pin)

• Negative/positive function

For special applications such as a film shooting

• Dynamic shading compensation function

Compensates for uneven color caused by combining the lenses.

• High-resolution function

Enhances the vertical resolution.

2

FEATURES

• Electronic shutter

Built-in shutter speeds available are 1/120, 1/250, 1/500, 1/1000, 1/2000 and EEI. With the optional remote control unit (RM-LP55), the V. SCAN function is also available.

• Automatic internal sync/external sync switching

The KY-F50 incorporates an automatic internal sync/external sync switching system which is especially useful when switching camera images in multi-camera systems or when upgrading the system.

• Built-in EBU color bars generator

EBU color bars signal can be generated.

PRECAUTIONS

■ Safety Precautions

- To avoid malfunctions, keep flammable objects, water, and metal away from the unit's internal parts and circuitry.
- Improper connections may result in an unexpected malfunction, abnormal heat or fire.
- When there is any abnormality (abnormal noise, smell, smoke, etc.) with the unit, immediately turn the power off and contact your nearest JVC-authorized service agent.
- If anything unusual (abnormal noise, smell or smoke) occurs, immediately turn off the power and contact your nearest JVC dealer.

• CCD Smear and blooming

Due to the physical structure of the CCDs in this camera it is possible to induce vertical streaking or smear when shooting an extremely bright light source.

Another effect is the expansion of light around a bright light or object called Blooming.

Just as you protect your image against lens flare (internal lens reflections); please be careful when shooting a bright light source.

- **Moire or Aliasing**

Shooting stripes, checks, or other alternating patterns may cause jagged or banding in fine mesh patterns.

- **White dots**

White dots may appear on the screen when the camera is operated in a high-temperature environment.

■ Handling Precautions

- **Do not use or store this camera in places subject to the following:**

- Strong vibrations.
- Exposure to excessive dust.
- Exposure to rain or water.
- Exposure to radioactive rays or X rays.

- **Ambient temperature**

Do not operate the camera outside a -5°C to $+40^{\circ}\text{C}$ (23°F to 104°F) temperature range.

- **Effects of strong electric waves or magnetism**

Strong electromagnetic waves or magnetism (for example, near a radio or TV transmission antenna, transformer or motor) can interfere with the image and generate spurious noise or color.

- **Supply voltage**

Make sure that the power is between 10.5 V and 15 V DC. If the power voltage is too low, abnormal color and increased noise could occur. Do not exceed 15 V DC in any case, or the unit could be damaged.

- **Effect on wireless microphones**

During shooting, this camera may interfere with operation of a wireless microphone and receiver. If used near the camera, the wireless receiver may pick up noise.

- **Cleaning the body**

Wipe body with a dry, soft cloth (such as cheesecloth). When it is extremely dirty, soak the cloth in a solution of neutral detergent, wring it out and then wipe. To prevent deformation of the body, etc. and to avoid operation hazards, do not allow volatile liquids such as benzene and thinner to touch the body. If the equipment is soiled with water, oil, solvent, etc., wipe over with soft cloth or cotton first, then clean with gauze, etc. soaked in denatured alcohol.

- **Installation of the camera**

Be sure to set up the camera firmly and correctly.

- **Cleaning the optical system**

Clean the front and external lenses to prevent dust from adhering to them.

4

CONTROLS, CONNECTORS AND INDICATORS

1 Lens mount ring

Install the lens on the lens mount.

2 [RGB, Y/C, COMP OUT] D-SUB terminal

Outputs signals (RGB signals, Y/C443 signals, component signals) selected with the 3 select switch and video signals/sync signals.

3 [RGB, Y/C, COMP OUT] select switch

Selects the output signals from the 2 D-SUB terminal.

RGB : RGB signals are output.

Y/C : Y/C443 signals are output.

COMP : Component signals are output.

Note:

As for the output connectors, refer to page 28.

- ④ **[VIDEO OUT] composite video signal output connector**
Outputs composite video signals.

- ⑤ **[POWER, DC IN] power indication LED and DC input connector**

Connect to the AC adapter (optional AA-P700) with the provided cable. When power is supplied, the power indication LED will light.

- ⑥ **[TRIGGER] trigger connector**

Accepts input/output signals for random trigger and slow-shutter operation.

- ⑦ **[GENLOCK IN] external sync signal input connector**

Accepts an external reference signal to genlock the camera. Input composite video signals or black burst signals.

- ⑧ **[REMOTE] remote connector**

Connect the remote control unit (optional RM-LP55.)

Note:

When the remote control unit is used, it has priority over the main unit with all duplicated functions.

- ⑨ **[MENU] menu button**

Activates or deactivates the MENU screen or changes the menu page.

→ MENU screen OFF → MENU screen 1/2 → MENU screen 2/2

[MENU operation]

- ① Press the MENU button to show MENU1/2 screen.
- ② Move the cursor to the item whose data you want to change with the ITEM (-) and (+) buttons. The item's data will blink.
- ③ Change the data with the DATA (-) and (+) buttons.
- ④ Repeat procedures ② and ③.
- ⑤ When all settings for MENU 1/2 are complete, press the MENU button. The MENU2/2 is shown.
- ⑥ Repeat procedures ② and ③ in the same way.
- ⑦ When all settings for MENU2/2 are complete, press the MENU button. MENU2/2 disappears, indicating that the MENU settings are complete.

(Upper section of the rear panel)

Blinks

Example when DATA is selected

MENU screen 1/2

6

CONTROLS, CONNECTORS AND INDICATORS

Blinks

Example when HI-RESO is selected

MENU screen 2/2

[When the MENU screen is ON]

- ⑩ **[ITEM (+), ITEM (-)]**

Changes the items on the MENU screen.
With (+), you can choose the lower items.
With (-), you can choose the upper items.

- ⑪ **[DATA (+), DATA (-)]**

Changes the data for the selected item on the MENU screen.

[When the MENU screen is OFF]

- ⑩ and ⑪ buttons have different functions.

- ITEM (-) button → AUTO WHITE start button
When AUTO1 is selected for WHITE BALANCE, this button activates AUTO WHITE.
- ITEM (+) button → BARS button
This button switches video output signals between BAR and CAM.

- DATA (+), DATA (-) button → AUTO IRIS LEVEL adjustment

This button adjusts the AUTO IRIS level with ALC, ALC + EEI, EEI mode. When the level is off the reference value, the LEVEL LED is lit.

- ⑫ **[RESET] reset button**

When this button is pressed, all data for the MENU items is reset to the reference value.

Reset items and reference values

Items	Reference values	Items	Reference values
DATA	CAMERA	SC COARSE	0
GAIN	0 dB	SC FINE	0
SHUTTER	NORMAL	IRIS DETECT	NORMAL
WHITE BAL	AUTO1		
M BLACK	NORMAL	DY-SH MODE	NORMAL
CONTOUR	NORMAL	DY-SH(R, G, B)	0
GAMMA	ON		
HI-RESO	OFF		
NEGA	OFF	BARS	OFF
H PHASE	0	A IRIS LEVEL	NORMAL

- ⑬ **[LEVEL] auto iris level LED**

The LED is lit when the auto iris level is off the reference value.

PREPARATIONS

■ Mounting the lens

The KY-F50 is not provided with a lens.
The 2/3-inch, C mount lens is required.

1. Remove the cap from the lens mount. Be careful that no dust gets on the mount.
2. Insert the lens into the mount and turn it clockwise to install.

Notes:

- The lens's auto function cannot be controlled with this unit.
- Resolution decreases depending on the lens.
- The viewing angle may change if a 2/3-inch lens is not used.
- Certain lenses may cause ghosting, flaring and shading (color unevenness).
- Be sure the lens is securely attached; otherwise, the back focus adjustment cannot be properly performed.

8

PREPARATIONS

■ Mounting on a tripod stand, fixing unit or pan/tilt unit

[When mounting the bottom of the camera]

1. Install the camera using the camera mounting bracket on a tripod, stand, fixing unit or pan/tilt unit.

[When mounting the top of the camera]

1. Remove the three camera mounting bracket screws on the bottom of the camera.
2. Secure the camera mounting bracket to the top of the camera with the three screws.
3. Install the camera using the camera mounting bracket on the tripod, stand, fixing unit or pan/tilt unit.

Note:

Tripods, stands, fixing units or pan/tilt units used with this camera should have a rotation stopper and camera mounting screw. If a rotation stopper is not provided, the secured section may loosen and the camera may come off.

(Example) Mounting on a fixing unit

- When the camera mounting bracket is secured on the bottom

- When the camera mounting bracket is secured on the top

Notes:

- When mounting this camera on a wall or ceiling with a fixing unit or pan/tilt unit, special precautions should be taken for security. You should ask a qualified service person to perform the installation.
- For installation, consult your JVC dealer or JVC service center. JVC is not responsible for damage to the camera caused by falling, dropping, etc., as a result of improper installation.

10

CONNECTIONS

- Before connection, make sure that the power of all equipment is turned off.

Connect to "GENLOCK"

Sync signal (composite video signal or black burst signal)
For details on genlocking connections, refer to "GENLOCKING OPERATION" on page 26.

Note:

When the coaxial cables are connected, terminate all systems including unused 75 ohm systems.

12

SETUP

To ensure clearer pictures and correct color tones, perform the back focus and white balance adjustments.

- Once the back focus adjustment has been performed during lens adjustment, no further adjustments are required.
- White balance must always be adjusted prior to shooting.

1. Prior to adjustment, make sure all necessary equipment (such as a monitor) has been connected. Refer to "CONNECTIONS" on page 11. Then set the camera's switches as shown below.
2. Connect the power plug of the AC adapter (optional AAP700) to an AC outlet and set the power switch to "ON". The camera's POWER OFF will light up.

Note:

An overcurrent detecting circuit is provided with this camera to protect the electric circuits. Therefore, when the power supply voltage fluctuates or the power of the AC adapter is switched ON and OFF repeatedly, the power may not be supplied correctly to the camera. However, this is not a malfunction.

To restore the power, first switch the power of the AC adapter to OFF, wait for several seconds, then switch the power ON again.

3. Aim the camera at an appropriate subject, operate the lens focus and zoom, and confirm that the picture is shown on the monitor.

■ Back focus adjustment

Perform this adjustment while referring to a monitor.

- The camera must be at least 3 meters from the subject to enable correct adjustment.

For zoom lens

1. Loosen the back focus fixing screw (LOCK) by turning it counterclockwise (↺) with a screwdriver.
2. Open the lens iris.
3. If the illumination is too strong (the picture is flat white), engage the EEI mode.
 - When only the camera is used, select EEI from the SHUTTER item on menu screen 1/2.
4. Turn the zoom ring to the maximum telephone position.
5. Adjust the lens focus.
6. Turn the zoom ring to the maximum wide angle position.
7. Turn the back focus adjustment screw (FOCUS) until optimum focus is obtained.
8. Repeat steps 4 to 7 two or three times.
9. Secure the back focus fixing screw (LOCK) by turning it clockwise (↻).

For fixed focus lens

1. Open the lens iris.
2. If the picture is flat white, engage the EEI mode.
3. Adjust the lens focus.

If optimum focus cannot be obtained, perform the following steps.

4. Loosen the back focus fixing screw (LOCK) by turning it counterclockwise (↺) with a screwdriver.
5. Turn the back focus adjustment screw (FOCUS) until optimum focus is obtained.
6. Secure the back focus fixing screw (LOCK) by turning it clockwise (↻).

Note:

When the adjustment is complete, release the EEI mode.

14

SETUP

■ White balance adjustment

- If the color temperature of the light source changes during shooting, white balance adjustment is required.

1. Check that WHITE BAL is set to "AUTO" on the MENU screen. If it is set to any other mode, set to "AUTO" using the MENU.
(Refer to [4] WHITE BAL on page 19.)
2. Shoot a white subject (white paper, white wall, etc.) or gray scale chart in full screen using the remote control.

3. Press the auto white start button (AW). The start message will be displayed.

Note:

When the white paint is set with the remote control unit, white paint data is set to OFF.

♦ Start message

AUTO WHITE1 OPERATION	AUTO WHITE2 OPERATION
--------------------------	--------------------------

Auto white start button

4. When auto white adjustment is complete, one of the following messages is shown.

♦ Normal adjustment completion message

AUTO WHITE1 COMPLETED	AUTO WHITE2 COMPLETED
--------------------------	--------------------------

♦ Abnormal adjustment completion message (1)

AUTO WHITE1 LOW LIGHT ERROR	AUTO WHITE2 LOW LIGHT ERROR
--------------------------------	--------------------------------

♦ Abnormal adjustment completion message (2)

AUTO WHITE1 OVER LIGHT ERROR	AUTO WHITE2 OVER LIGHT ERROR
---------------------------------	---------------------------------

♦ Abnormal adjustment completion message (3)

AUTO WHITE1 OBJECT ERROR	AUTO WHITE2 OBJECT ERROR
-----------------------------	-----------------------------

Note:

This camera only has the AUTO1 mode. However, when WHITE BAL is activated with the RM-LP55, 2 modes (AUTO1/AUTO2) are available.

Notes:**• SUBJECT ERROR**

The subject is color.

Shoot a white subject.

The color temperature is out of the adjustment range (2500K to 8000K).

Insert the color temperature conversion filter in front of the lens.

• LOW LIGHT ERROR, OVER LIGHT ERROR

The illuminance of the subject is too low or high.

Adjust the illumination.

■ Full-time auto white balance**(automatic color temperature maintenance)**

- The full-time auto white balance automatically adjusts white balance even if lighting conditions change to maintain optimum balance at all times.

Refer to "Full-time auto white balance" on page 30.

1. Set the WHITE BAL on the MENU1/2 to "FAW".

(Refer to [4] "WHITE BAL" on page 19.)

Note:

If the overall screen has a mono color tone or a vividly colored subject is shot, optimum balance adjustment is not possible. This is a phenomenon caused by the operation principle and not a malfunction. In this case, adjust white balance again following "White balance adjustment" on page 15.

OPERATIONS (MENU operation)

The following menus are available for this camera.

- Menu
- Dynamic shading compensation (see page 23)
- STATUS check menu (see page 24)

[MENU operation method]

- ① Pressing the MENU button outputs the MENU 1/2 screen.
- ② Move the cursor to the data to be changed with the ITEM (-) and (+) buttons. The selected data will blink.
- ③ Change the data with the DATA (-) and (+) buttons.
- ④ Repeat steps ② and ③.
- ⑤ When the all settings on MENU 1/2 are complete, press the MENU button to display the MENU 2/2 screen.
- ⑥ Repeat steps ② and ③.
- ⑦ When the all settings on MENU 2/2 are complete, press the MENU button. MENU 2/2 disappears, indicating that MENU setting is complete.

[1] DATA

- To maintain the conditions set up with the RM-LP55.
- ① Select the "DATA" with the ITEM (-) and (+) buttons so that the data blinks.
 - ② Change the data with the DATA (-) and (+) buttons.

CAMERA : Normal use. This setting is used when the camera is used by itself.

MEMORY: This setting is used when the remote control data is stored in the camera with the RM-LP55. (For details, refer to the RM-LP55's instruction manual.)

Even if the RM-LP55 is disconnected and the power switch is turned ON and OFF, data set by the RM-LP55 is retained.

[2] GAIN

- To increase the sensitivity electronically
- Select the "GAIN" with the ITEM (-) and (+) buttons so that the data blinks.
 - Change the data with the DATA (-) and (+) buttons.

When a subject is too dark and sufficient light cannot be obtained, the sensitivity of the camera can be increased electronically.

The increased amount of the sensitivity

- 0 dB : Standard
- +6 dB : Double
- +9 dB : 2.8 times
- +12 dB : 4 times
- +18 dB : 8 times

- The higher the sensitivity, the coarser the picture.
 - The ALC sets automatically the camera sensitivity according to the brightness of the subject.
- See "ALC and EEI operations" on page 29.

[3] SHUTTER

- Setting the Shutter mode
- Select "SHUTTER" with the ITEM (-) and (+) buttons so that the data blinks.
 - Change the data with the DATA (-) and (+) buttons.

- Useful when shooting a fast-moving subject.
- In the NORMAL mode, the shutter speed is 1/50 sec. The shutter speed can be selected from 1/120, 1/250, 1/500, 1/1000, 1/2000 and EEI.
- EEI function lets the electronic shutter automatically set the level when operating under very bright illumination. See "ALC and EEI operation" on page 29.

Note:

Use the EEI mode outdoors. When the EEI mode is used under a fluorescent lamp, the image may flicker.

18

OPERATIONS (MENU operation)

[4] WHITE BAL

- White balance adjustment
- Select "WHITE BAL" with the ITEM (-) and (+) buttons so that the data blinks.
 - Change the data with the DATA (-) and (+) buttons.

Auto white start button

AUTO1 : Activates white balance set with the automatic adjustment function. Engage this mode with the ITEM (-)/AW button.

PRESET : Activates white balance set under illumination with the color temperature of 3200K.

FAW : Automatic color temperature maintenance white balance.
See "Full-time auto white balance" on page 30.

[5] M BLACK

- Setting the master black level
- Select the "M BLACK" with the ITEM (-) and (+) button so that the data blinks.
 - Change the data with the DATA (-) and (+) buttons.

- The reference black level (master black) can be set.
+10 : Highest black level condition
-10 : Lowest black level condition

[6] CONTOUR

- Contour compensation adjustment
- ① Select "CONTOUR" with the ITEM (-) and (+) buttons so that the data blinks.
- ② Change the data with the DATA (-) and (+) buttons.

- Contour compensation function electronically emphasizes the peaks and valleys of a video signal to obtain a sharper picture.
- +10 : Much
- NORMAL : Standard
- 10 : A little
- OFF : No compensation

[7] GAMMA

- Setting the gamma compensation
- ① Select "GAMMA" with the ITEM (-) and (+) buttons so that the data blinks.
- ② Change the data with the DATA (-) and (+) buttons.

- The gamma compensation is set to ON and OFF.
- ON : Gamma compensation applied (gamma ratio of 0.45)
- OFF : No gamma compensation applied (gamma ratio of 1)

20

OPERATIONS (MENU operation)

[8] HI-RESO

- Setting the High-resolution mode
- ① Select the "HI-RESO" with the ITEM (-) and (+) buttons so that the data blinks.
- ② Change the data with the DATA (-) and (+) buttons.

- The HI-RESO mode enhances the resolution in the vertical direction and should be used when shooting a still picture or when using this camera as a microscope. (Storage time is 1/25 sec.)
- ON: The HI-RESO mode is engaged. See "HI-RESO mode" on page 31.
- OFF: The Normal Shooting mode is engaged.

Note:

When a moving subject is shot in the HI-RESO ON mode, the after-image lag phenomenon is greater than in the OFF mode.

[9] NEGA

- Setting negative video
- ① Select "NEGA" with the ITEM (-) and (+) buttons so that the data blinks.
- ② Change the data with the DATA (-) and (+) buttons.

- Use when taking a positive film from a negative film.
- ON : The camera video signals are reversed (negative) for output.
- OFF: The camera video signals are output.

[10] H PHASE

[11] SC COARSE

[12] SC FINE

Refer to "GENLOCKING OPERATION" on page 26.

[I3] IRIS DETECT

- Setting the Iris Detection mode
- ① Select "IRIS DETECT" with the ITEM (-) and (+) buttons so that the data blinks.
- ② Change the data with the DATA (-) and (+) buttons.

- Use to change the iris setting according to the subject.
(The selected IRIS DETECT mode is activated only when the LENS mode is set to "AUTO".
NORMAL : Standard setting
PEAK : The iris is set for the peak of the video level.

Use this mode when shooting a subject lit by a spot light.

AVG : The iris is set to the average value of the video level.

Use this mode to obtain a brighter shot of a backlit subject.

22

OPERATIONS (MENU operation)

■ DY-SH ADJ

- Dynamic shading adjustment

Shoot a white subject (white paper, white wall, etc.) in full screen and adjust the R/G/B data so that the coloring in the upper and lower parts of the monitor screen is minimized.

- ① While holding the MENU button pressed, press the ITEM (-) button. Then, release the MENU button.
- ② Set the mode to "ADJUST" with the DATA (-) and (+) buttons.
- ③ Move the cursor to the data to be changed. The selected data will blink.

- ④ Change the data with the DATA (+) and (-) buttons.
- ⑤ Repeat steps ③ and ④.
- ⑥ When the settings for DY-SH ADJ are complete, press the MENU button. The DY-SH ADJ screen goes out.

Note:

Note that if you press the MENU button while holding the ITEM (-) button pressed, the AUTO WHITE MODE is engaged.

■ STATUS check operation

Two STATUS screens are available. These screens allow you to check the conditions set on the camera's MENU screen or the settings stored in memory using the local remote control (RM-LP55).

- ① While holding the MENU button pressed, press the ITEM (+) button. Then, release the MENU button. The status 1/2 screen will appear.
- ② When the DATA on the MENU 1/2 screen is set to "CAMERA", the setting conditions set on the MENU screen are shown. When it is set to "MEMORY", settings stored in memory using the remote control unit (RM-LP55) are shown.
- ③ Press the MENU button to show the STATUS 2/2 screen.
- ④ Press the MENU button to end the STATUS screen.

Note:

When the DATA is set to CAMERA on the STATUS 1/2 screen (without using the RM-LP55) pressing and holding the ITEM (+) button causes color bars and camera pictures to alternate on the screen. In this condition, press the MENU button.

- STATUS 1/2 -	
DATA	: REMOTE
GAIN	: 0dB
SHUTTER	: NORMAL
WHITE BAL	: AUTO1
<RCH:0 BCH:0>	
M BLACK	: NORMAL
CONTOUR	: NORMAL
GAMMA	: ON

STATUS 1/2 screen

- STATUS 2/2 -	
HI-RESO	: OFF
NEGA	: OFF
H PHASE	: 0
SC COARSE	: 0
SC FINE	: 0
IRIS DETECT	: NORMAL
IRIS LEVEL	: NORMAL

STATUS 2/2 screen

Note:

H PHASE, SC COARSE and SC FINE are displayed only while genlocking is performed.

24

GENLOCKING OPERATION

When pictures from more than one camera are to be processed (fade in, fade out, and mix wipe) with a special effects generator (SEG), genlocking is used to synchronize the various camera pictures.

- The sync phase adjustment can be performed with the remote control unit (optional RM-LP55) as well.

[10] H. PHASE

- Adjustment of the horizontal sync phase
- Select the "H PHASE" with the ITEM (-) and (+) buttons so that the data blinks.
 - Change the data with the DATA (-) and (+) buttons.

[11] SC COARSE

- Adjustment of the color sync phase
- Perform coarse adjustment with the color sync phase coarse adjustment. (0°/90°/180°/270°)
- Select "SC COARSE" with the ITEM (-) and (+) buttons so that the data blinks.
 - Change the data with the DATA (-) and (+) buttons.

26

[12] Adjustment of the SC FINE

- Fine adjustment is performed by changing the color sync phase fine adjustment data.
- Select "SC FINE" with the ITEM (-) and (+) buttons so that the data blinks.
 - Change the data with the DATA (-) and (+) buttons.

Notes:

- If a vector scope and a waveform monitor are available, these adjustments can be performed accurately.
- A VCR playback signal cannot be used as a sync signal. Be sure to use a TBC (time base corrector) such as a frame synchronizer.
- Be sure to use an underscan monitor as a monitor.

TECHNICAL INFORMATION

■ ALC and EEI operations

- ALC refers to automatic level control and EEI to shutter iris control. The video circuit of the KY-F50 employs a system that maintains the video level at a constant level through a combination of the lens's auto iris, continuously variable electronic shutter (EEI), and automatic level (sensitivity) control circuit (ALC).
- In low-light conditions, the automatic level control circuit is activated while, in brighter light, the electronic shutter operates. Moreover, if the iris is set to auto, the sensitivity, iris, and electronic shutter will all vary continuously to automatically ensure the optimum signal level at all times.
- In the ALC mode, sensitivity (gain) is increased between 0 dB and +18 dB. In the EEI mode, the electronic shutter automatically operates at a range from 1/50 to 1/1600 second depending on the strength of the lighting. This means that in dark conditions, the signal level will be adjusted by 3 stops of the iris whereas in bright situations, it will be adjusted by a range of 5 stops.

Illumination: lux

TECHNICAL INFORMATION

■ Full-time auto white balance

Full-time auto white balance is a function which automatically and continuously adjusts white balance as necessary. In some cases — such as when there is a single color on the screen, when the subject is wearing a vivid color, or when the color temperature of the light source changes etc., — correct white balance may not be obtained. If this occurs, we recommend you adjust the white balance by referring to "White balance adjustment" on page 15.

Color temperature

■ Operation principle of the electronic shutter (Example: 1/500 sec)

Electric charge is stored in a CCD image device for only 1/500 second before the signal is read out from the CCD device and the electric charges stored prior to that are discharged (swept out) in order to achieve a shutter speed of 1/500 second.

Cautions in the use of the electronic shutter mode

- The motion of the subject will be seen as stroboscopic motion on the monitor TV screen as a 1/500 second picture is extracted every 1/50 second.
- As flicker results under a periodic lighting such as a fluorescent lamp, it is necessary to use lighting which is free from excessive periodic changes such as an incandescent lamp.
- As the storage time of the CCD device is decreased to approximately 1/8, the drop in the amount of light will be by a factor of 1/8 of that in the normal mode. In shooting, it is necessary to increase the illumination by 8 times or increase light intensity by opening the lens aperture by 3 stops if there is sufficient light.

30

■ High-resolution mode

To increase the vertical resolution, a one line readout method is used for the CCD image sensing device. The mode activating this system is called the High-resolution mode for this camera.

Two signal readout methods are available for the CCD image sensing device: Field storage method and frame storage method.

The field storage method (2-line simultaneous readout) stores signals for one field (1/50 sec.) while the frame storage method stores signals for one frame (1/25 sec.). The former is used for the NORMAL mode and the latter is used for the HI-RESO mode.

• NORMAL mode (field storage, 2-line simultaneous readout)

For field storage, 2 lines are mixed and read out simultaneously. (The combination of lines on odd fields and even fields are different.) This reduces vertical resolution. However, after-image lag is also reduced because the storage time is shorter than for frames.

As all signals are read out with one field, when analyzing the action using strobe radiation, one radiation is required for each field. If video signals are acquired for only one field, flickering occurs.

Line ①	①+②		①+②
Line ②			②+③
Line ③	③+④	②+③	③+④
Line ④		④+⑤	④+⑤
Line ⑤	⑤+⑥	⑤+⑥	⑤+⑥
Line ⑥		⑥+⑦	⑥+⑦
CCD pixels	Odd field CCD output	Even field CCD output	Monitor picture

- High-resolution mode (frame storage, single line readout)
In the HI-RESO mode, as only one line is read out, the vertical resolution is increased. However, the storage time is for each frame. Thus, if the subject moves within 1/30 sec., after-image lag will result.
This mode is best suited to shooting still or slow-moving subjects. When analyzing the action with strobe radiation, one radiation is sufficient for one frame.

Line ①	①	During storage	①
Line ②	During storage	②	②
Line ③	③	During storage	③
Line ④	During storage	④	④
Line ⑤	⑤	During storage	⑤
Line ⑥	During storage	⑥	⑥
CCD pixels	Odd field CCD output	Even field CCD output	Monitor picture

■ Operation of the random trigger

Used to recognize the picture by detecting an object. When the trigger signal for object detection is input, a charge is stored in the CCD pickup element of the camera to be output through synchronization with the next sync signal. This is used by latching it in memory with an SI signal which is output simultaneously. When viewing it on the monitor, the movement of the subject is stroboscopic. 2 modes are available for selection by the output timing on the camera for a trigger

input signal.

1. Sync non-reset mode

The timing of the camera is output as is, regardless of the trigger signal. When the camera is genlocked, output occurs with timing synchronized with the GENLOCK IN input signal.

2. Sync reset mode

The camera's timing is output through synchronization with the trigger input signal. In this case, while setting up the system as the trigger signal becomes a reference signal, the genlock function does not activate.

The camera is set to the sync non-reset mode.

Note:

Input the grounded pulses of the GND terminal as a trigger signal into the external trigger terminal. The trigger signal should be a negative-polarity signal with a pulse width of 20 μ s to 5 ms and a pulse interval of 40 ms or more. If this signal contains noise (chattering), a malfunction may occur, making the picture disappear. When such a case occurs, turn the power off then on again.

■ Slow shutter function

Used to shoot in dark places. This function does not increase the gain electrically, but takes a long time to store the charge in the CCD pickup element so that a higher charge can be obtained, allowing higher sensitivity pictures to be obtained even under a small amount of light.

The time for storage is up to 200 frames (approx. 8 sec.). As one frame is output for several frames, it is latched in memory by outputting WEN signals at the same time. When watching it on the monitor, the movement of the subject is stroboscopic.

- In the Auto Iris mode, use with a normal video signal level is not possible. So, close the iris in the manual iris mode.
- Switching the HI-RESO mode allows selection of the field output or frame output.

Note:

When the number of frames is increased, noise may increase. Therefore, set it to the appropriate value.

32

SPECIFICATIONS

Power supply	: AA-P700
Remote control unit	: RM-LP55
Pickup device	: 1/3 inch interline CCD x 3
Effective number of pixels	: 440,000 pixels
Color separation optical system	: F1.4, RGB 3-color separation prism
Lens mount	: C mount
Color system	: PAL (wideband R-Y, B-Y encoder)
Sync system	: Internal/external
Sensitivity	: F10, 2000 lux
Actual-use minimum illuminance	: 55 lux (F3.2, +18 dB) 100 % video level
S/N ratio	: 58 dB (typical)
Horizontal resolution	: 700 TV lines (Y signal) 580 TV lines (RGB signal)
Registration	: 0.05% at center (excluding lens characteristics)
Contour correction	: Horizontal; dual-edged Vertical; single-edged
Negative function	: Provided
High-resolution mode	: Provided
Electric gain	: +6 dB, +9 dB, +12 dB, +18 dB, ALC
Electronic shutter speed	: Normal (1/50 sec) 1/120, 1/250, 1/500, 1/1000, 1/2000, EEI
External sync signal input	: Composite video signal 1 V(p-p), 75 ohm or black burst signal 0.45 V(p-p), 75 ohm
Color bars	: Built-in EBU color bars signal

Output signals

- Composite video : 1 V(p-p)
signal BNC connector one channel,
D-SUB 9-pin connector one channel
- Y/C signal Y : 1 V(p-p), 75 ohm (including sync)
C : 0.3 V(p-p), 75 ohm (burst)
D-SUB 9-pin connector one channel
- RGB signal : 0.7 V(p-p), 75 ohm (without sync) each
D-SUB 9-pin connector one channel
- Component signal: Y : 1 V(p-p) 75 ohm
R-Y/B-Y : 0.525 V(p-p) 75 ohm
D-SUB 9-pin onnector one channel
- Composite sync : 2 V(p-p), 75 ohm
signal D-SUB 9-pin connector one channel
- Trigger connector: TRG : 5 V(p-p) (Negative polarity)
SI : 5 V(p-p) (Negative polarity)
WEN : 5 V(p-p) (Negative polarity)

Remote connector : Applicable to the RM-LP55

Power supply : 12 V DC (10.5 to 15 V)

Power consumption : 8.5 W (camera only), 12 W (maximum load)

Ambient temperature

range : -5°C to 40°C (23°F to 104°F)

Weight : 870 g

Accessories : DC cable (VC462-2: 2 m) x 1

Design and specifications are subject to change without prior notice.

■ Dimensions (unit: mm)

JVC

VICTOR COMPANY OF JAPAN, LIMITED

SECTION 1 SERVICE CAUTIONS AND DISASSEMBLY

1.1 CARD FIT CABLE CONNECTION

- Insert the card fit cable so as to contact the copper leaf on its edge to the connector's conductive surface as shown in Fig. 1-1-1.
- For disconnecting the card fit cable (flat cable), pull the cable stoppers in the direction of the arrows. To secure the connection of the card fit cable, push the cable stoppers in the reverse direction of the arrows after inserting the cable.

Fig. 1-1-1

1.2 REMOVAL OF COVER

1. Remove four screws (1), and then remove the rear panel (A) with the rear frame.
2. Remove two screws (2) from the cover (B).

Fig. 1-2-1

3. Remove three screws (2) from the cover (B), and then pull out the cover (B) from the main chassis.

Fig. 1-2-2

1.3 REMOVAL OF CIRCUIT BOARDS

1. Remove the cover (B) referring to the section 1.2.

1.3.1 Removal of ST board

1. Remove four screws (3) while remove the ST board only. When remove the circuit board, remove a screw (4) from front of the bracket (C) and loosen the screws (5) in left and right sides, then the circuit board remove together with the bracket (C) in the direction of the arrow.

Note:

Make sure that the screws (5) are firmly tightened as the ST bracket (C) is closed.

Fig. 1-3-1

1.3.2 Removal of plug-in circuit boards

1. The circuit boards named CE, PR, DT and CP are located on the MT board.
Pull out these circuit boards upward and remove them.

Fig. 1-3-2

1.3.3 Removal of IF board

1. Remove three screws (6) and pull the rear plate (D) rearward.

Fig. 1-3-3

2. Unsolder the connector at the points shown in Fig. 1-3-4.

Fig. 1-3-4

1.4 REMOVAL OF FRONT PANEL

1. Remove four screws (7) from the front panel (F), and then detach the front panel (F).

Fig. 1-4-1

1.5 REPLACEMENT OF OPTICAL BLOCK ASSEMBLY

1. Remove the cover and front panel referring to the section 1.2 and 1.4 respectively.
2. Remove the rear plate referring to the section 1.3.
3. Remove three screws (7), and then remove the ST bracket (G) from the main body.

Fig. 1-5-1

4. Remove the CE, PR, DT and CP boards referring to the section 1.3.2.
5. Remove three screws (8) from frame (H).

Fig. 1-5-2

6. Remove four screws (9).

Fig. 1-5-3

7. Slide the optical block assembly to the rear as shown in Fig.1-5-4.

Fig. 1-5-4

8. In this condition, turn the lens assembly (I) towards the arrow and then remove the optical block assembly together with bracket (J).

Note:

When fitting the lens assembly (I) to the optical block assembly, carefully do it not to get the lens assembly free from dust, particularly the lens surface.

Fig. 1-5-5

9. Remove four screws (10), and then remove the bracket (J) from the optical block assembly.

Fig. 1-5-6

Note

If something wrong is detected in the CCD, the CCD cannot be replaced alone since it is precisely glued to the prism. The defective CCD must be replaced with a new optical block assembly as a whole.

1.6 IS BOARD

The IS board is assembled with the CCD in a set. Although the assembly is removable by disconnecting it from the IC socket, do not remove it to prevent the registration from getting abnormal. For disconnecting the FPC cable, do it from the connector of the ST board. When replacing the FPC cable, be most careful not to apply unreasonable force to the board.

1.7 EXTENSION BOARD

For extending the CP, PR boards use the extension board of 24-pin or 14-pin.

24-pin: Part No. SCV2463-024
14-pin: Part No. SCV2463-014

2.2 REQUIRED EQUIPMENT FOR ELECTRICAL ADJUSTMENT

2.2.1 General instruments necessary for adjustment

1. Oscilloscope (capable of measuring on 100 MHz or higher band, moreover, must be calibrated.)
2. Vectorscope (must be calibrated.)
3. Frequency counter (readable eight-digit number and stable with tolerance of 0.1 ppm or 1×10^{-7} at 0° to 40°, moreover, must be calibrated)
4. Digital voltmeter (having 10 M Ω or more input impedance, moreover, must be calibrated)
5. Color video monitor

2.2.2 Other necessities

1. Power supply : 12V DC (Optional AC power adapter AA-P700)
2. Camera lens (H6 x 12.5R [FUJINON] preferable)
Lighting apparatus: By using a halogen lamps of 3200K, 2000lx illuminative brightness make it a chart please hit uniformly.

If the lighting apparatus is need to adjust illuminance on the test pattern, the following method is very simple to reduce video shading (to turn down contrast).
Connect an oscilloscope to the VIDEO OUTPUT terminal and adjust lighting so that video signal is observed flat at the V-rate.

2.2.3 Special implements for electrical adjustments

NOTE

- 1) For power supply to this camera, use the power cable (Part No. CE41155-002: 8-pin plug) supplied as a service part to do it from a 12V DC power source, or use the power cable VC-462-2(accessory) to supply from the AC power adapter AA-P700 (option).
- 2) Limited length of cable for power supply is shown below (in case of using AA-P700).

Diameter of conductor	Resistance	Limited cable length
0.5 mm	37 Ω /km	8.7 m
0.75 mm	25 Ω /km	13.0 m

2.3 ADJUSTMENT MODE

Some of the following adjustment items need to set the camera to the "Adjustment mode". The "Adjustment mode" enables the service personnel to adjust the specified items (except chroma level adjustment) with only one VR (VR901 on the CP board) by utilizing the rotary encoder (S902 on the CP board). Adjustment in the "Adjustment mode" should be performed as mentioned below.

1. Make sure that a TV monitor is connected to the VIDEO OUT terminal of this camera, and supply the rated power (12.0 ± 0.5 V) to the DC IN terminal.

2. Set S902 (rotary encoder switch) on the CP board to the position of "0" with screwdriver.

3. Set S901-4 (DIP switch) on the CP board to ON, and an adjustment picture will appear on the monitor screen. (See the figure below.)
After the adjustment picture has appeared on the monitor screen, set S902 to the number of the adjustment mode. (When S902 is set to the indicated number, the display turns to the next scene.)

4. Press S903 (tact switch) on the CP board once, and "*" mark appears on the left of "VR DATA" in the adjustment picture. Then, each adjustment can be performed with VR901. At that time, make sure that the value of D/A OUT is the same as that of VR DATA.

If the selected adjustment is needless to perform, change the setting of S902 to another position for cancelling the selected adjustment. (Setting S901-4 to the OFF position also cancels the selection of the adjustment. However, if S901-4 is used to cancel the selected adjustment, it needs a fresh start for another adjustment in the "Adjustment mode".)

Note: S903 has two functions, one is to enter the set into the adjustable status and the other is to store the adjustment data that is set by VR901 in the microcomputer (IC901). Such being the case, if S903 is pressed in the adjustable mode ("*" mark is appearing on the left of "VR DATA"), stored adjustment data is replaced with new data. Be careful not to press S903 unreasonably.

Adjustment is possible when this mark is appearing.

By turning VR901, values of VR DATA and D/A OUT change. (except for flare adjustment)

5. Adjust each item with VR901, press S903 after adjustment, and store adjustment data in EEPROM. In this function, confirm value of SET DATA on adjustment picture and value of VR DATA is equal.

Value of VR DATA is established as adjustment value by press S903.

Note: Return S902 to "0" and set S901-4 to OFF after all adjustments are completed.

2.11 ADJUSTMENT OF V-sub VOLTAGE

- As for this adjustment, please carry exchange of CCD into effect when they went only.
- As for this adjustment confirm and please find that there is not an abnormality on carrier balance of a picture highlight portion after this adjustment end which respectively has influence on smear and a dynamic range please find that there is no big difference in a carrier of right and left white when a gray scale chart was done a photographic statue by iris over and HI RESO of a near item has changed by ON and OFF.

1	Gch V-sub adjustment	<ul style="list-style-type: none"> • Oscilloscope (H-rate, 10:1) • TV monitor • Vectorscope • Point light source (incandescent lamp of more than 40 W) 	Adj. mode "7"	◎ VIDEO OUTPUT terminal ① VR901 [CP]	(1) Set S902 on the CP board to "0" . (2) Turn S901-4 on the CP board to ON. (3) Set S902 to "7" . (4) Shoot an incandescent lamp. (5) While opening the iris fully, confirm that there is smear in the picture. Note: When black paper or cloth is used as background, smear is easy to see. (6) Press S903 on the CP board once to make "*" mark appear on the left of "VR DATA" on the display. (7) While observing through the monitor screen, set VR901 to a position where the green belt of the smear turns into thin and white. Note: For performing this adjustment with easy, it is recommended to turn VR901 fully counterclockwise once and then to turn it clockwise gradually. (8) Press S903 on the CP board to store the adjustment data in the memory. (9) Adjust Rch V-sub.
<div style="display: flex; align-items: center; justify-content: center;">  →  </div> <p style="text-align: center; margin-top: 10px;">adjust VR901</p>					
2	Rch V-sub adjustment	<ul style="list-style-type: none"> • Oscilloscope (H-rate, 10:1) • TV monitor • Vectorscope • Point light source (incandescent lamp of more than 40 W) 	Adj. mode "6"	◎ VIDEO OUTPUT terminal ① VR901 [CP]	(1) Set S902 to "6" . (2) Press S903 on the CP board once to make "*" mark appear on the left of "VR DATA" on the display. (3) In the same manner as G-ch adjust VR901 so that the smear is reduced and turns into white. (4) Press S903 on the CP board to store the adjustment data in the memory. (5) Adjust Bch V-sub.
<div style="display: flex; align-items: center; justify-content: center;">  </div> <p style="text-align: center; margin-top: 10px;">Adjust smear so that it is scarce and White.</p>					
3	Bch V-sub adjustment	<ul style="list-style-type: none"> • Oscilloscope (H-rate, 10:1) • TV monitor • Vectorscope • Point light source (incandescent lamp of more than 40 W) 	Adj. mode "8"	◎ VIDEO OUTPUT terminal ① VR901 [CP]	(1) Set S902 to "8" . (2) Press S903 on the CP board once to make "*" mark appear on the left of "VR DATA" on the display. (3) In the same manner as G-ch adjust VR901 so that the smear is reduced and turns into white. (4) Press S903 on the CP board to store the adjustment data in the memory. (5) Change the adjustment mode to "7", "6" and "8" one after another to confirm that the smear is not increasing and still uncolored. (6) Set S902 to "0" and return S901-4 to OFF after adjustment.
<div style="display: flex; align-items: center; justify-content: center;">  </div> <p style="text-align: center; margin-top: 10px;">Adjust smear so that it is scarce and White.</p>					

SECTION 3 CHARTS AND DIAGRAMS

■ SCHEMATIC DIAGRAM NOTES

- **Schematic safety precaution**
 Parts are safety related parts.
 When replacing them, be sure to use the specified parts.
- **Voltage and waveform measurements.**
 Voltage : Measured with digital voltmeter in DC range; iris closed.
 Waveform : Grey scale illuminated at more than 4000 lux at 3200 K lighting.

- **Terminal logic**
 Top bar of terminal name show input or output logic.
 Top bar shows, the control circuit become active at negative (low) logic input for example.

• Digital transistors

- ① Number in these two places expresses the ohmage of R1 in abbreviation.
 43 : 4.7kΩ
 14 : 10 kΩ
 24 : 22 kΩ
 44 : 47 kΩ
- ② Roman letter in the place expresses the resistive ratio between R1 and R2 in abbreviation.
 E : R2/R1 = 1/1
 Y : R2/R1 = 5/1
 W : R2/R1 = 2/1
 X : R2/R1 = 1/2
 T : R2 is opened.
- ③ Symbol in this place expresses the shape of resistor in abbreviation.

• Transistors and F.E.T.s are:

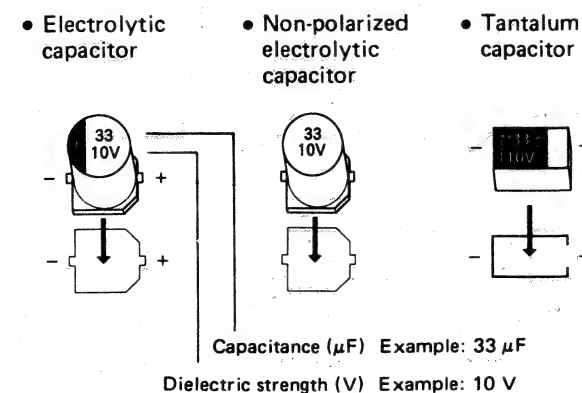

• Definition of the (A) and the (B) or circuit boards diagrams

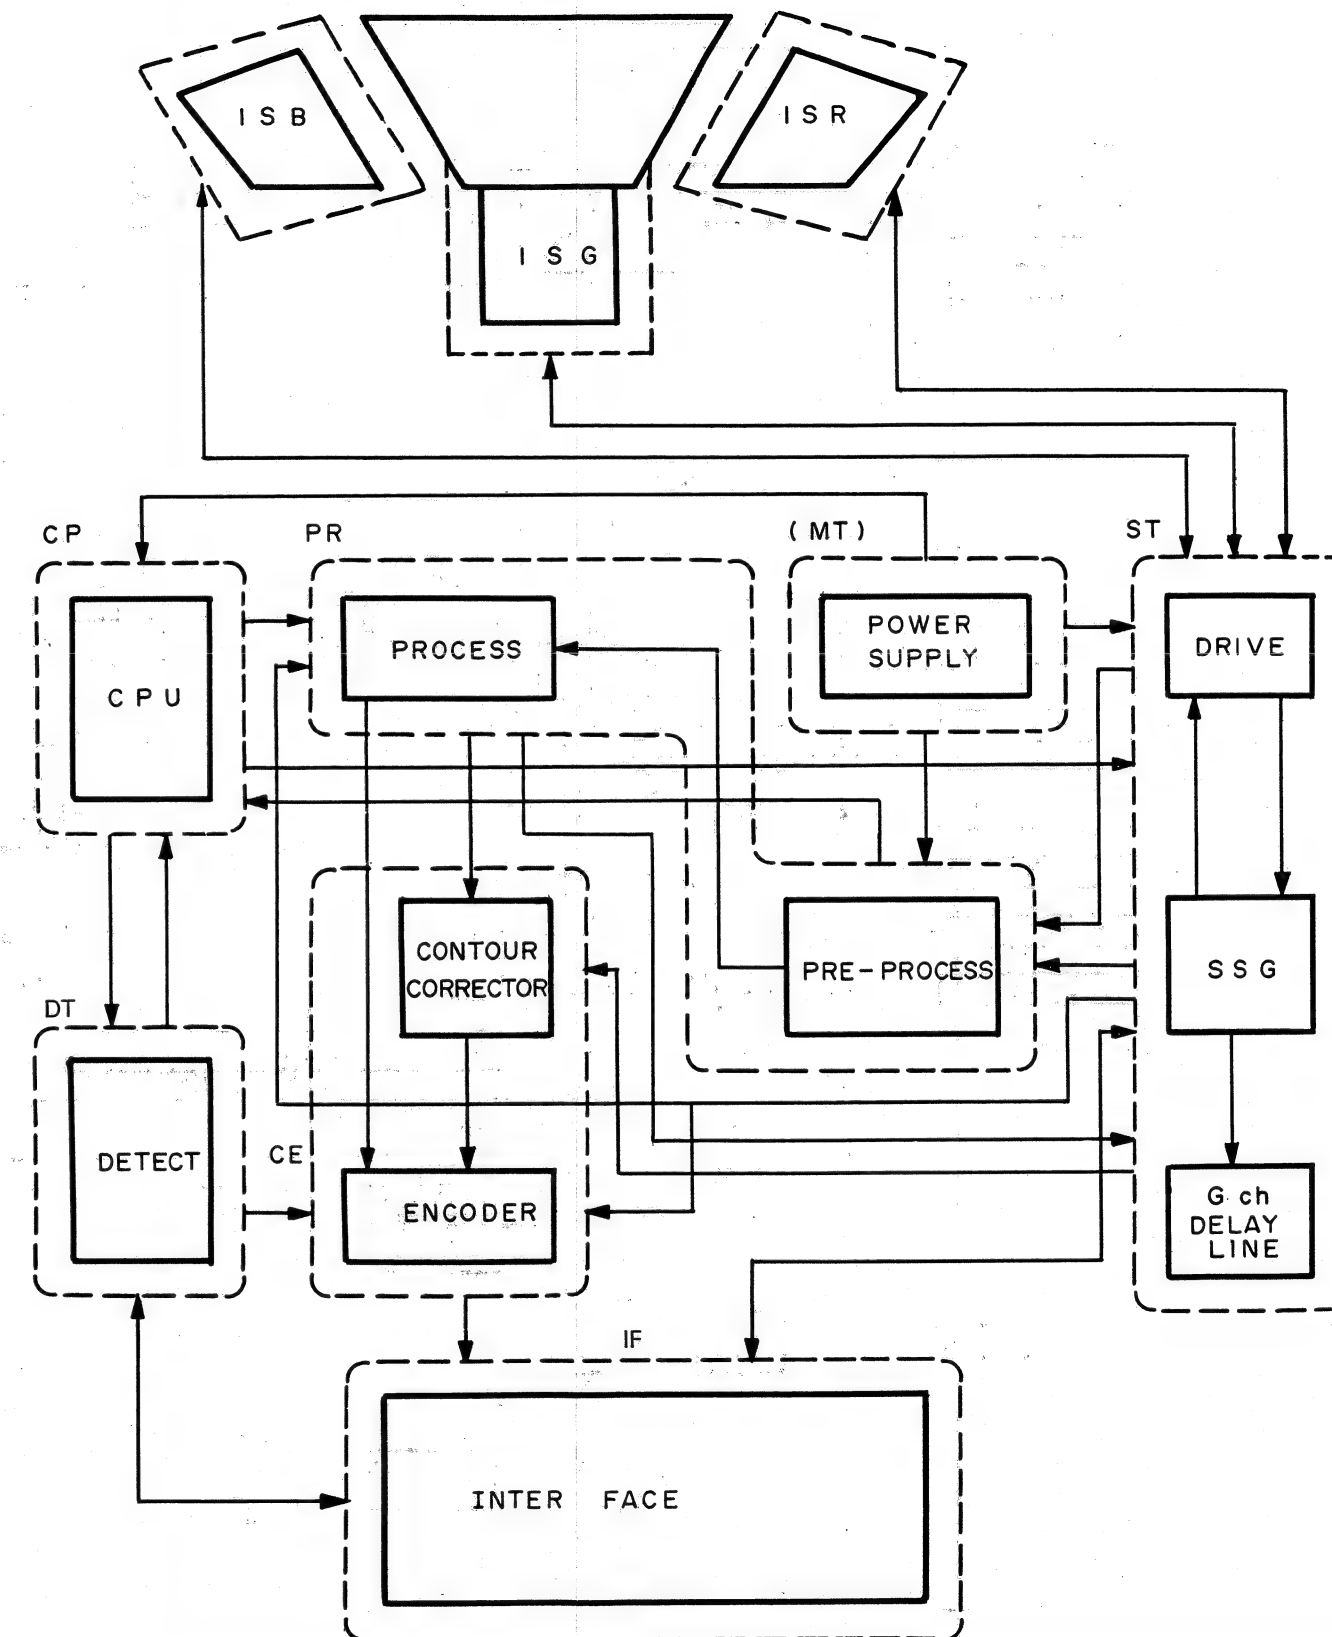

- (A) : Side on which discrete parts are assembled
- (B) : Side on which only chip parts are assembled.

■ REPLACING SUBMINIATURE "CHIP" PARTS

- Some resistors, shorting jumpers (0 Ω resistance), ceramic capacitors, transistors, and diodes are chip parts. These chip parts cannot be reused after they are once removed.
- Chip resistors used in some circuits are of high precision type having little error in resistance.
 To demonstrate the full capacity of this camera head, place an order for proper parts referring to the diagrams and parts lists in the sections 5.
- **Soldering cautions:**
 - 1) Do not apply heat for more than 3 seconds.
 - 2) Avoid using a rubbing stroke when soldering.
 - 3) Discard removed chips; do not reuse them.
 - 4) Supplementary cementing is not required.
 - 5) Use care not to scratch or otherwise damage the chips.
- Polarities of chip electrolytic capacitors and chip tantalum capacitors used in this model are as illustrated below.
 Polarities indicated by silk-screen printing on circuit boards are also shown below. When replacing such parts, make sure of polarities.

PALM	148T	147T	146T	144T
SECAM	162T	159T	156T	153T

Pin No.	Pin Name	Function
12	HP11	H. pulse 11 H. pulse to be active at 11H, 13H, 15H and 17H.
13	HP12	H. pulse 12 H. pulse to be active at 12H and 14H.
14	HP18	H. pulse 18 H. pulse to be active at 18H.
15	GND	Ground
16	AVD2	Pre-vertical drive pulse 2 Vertical drive pulse whose phase is 8H ahead of VD pulse. Functions as subcarrier blanking for SECAM system.
17	AVD1	Pre-vertical drive pulse 1 Vertical drive pulse whose phase is 1H ahead of VD pulse.
18	TST3	Test terminal 3 Set this terminal open in general.
19	TST4	Test terminal 4 Set this terminal open in general.
20	LSW	Line switch Half-divided FH output. Switches color difference signal of neighboring lines by 180° in phase for PAL system.
21	EOH	H. synchronizing digital phase comparison output As compared with leading edge of SHDI; when internal HD has advanced phase: Low level, when internal HD has lagged phase: High level, when internal HD is in-phase: High impedance.
22	SHDI	H. synchronizing digital phase comparison input (trailing detection) Input of horizontal drive signal originating from subcarrier. Active when EXTI is low level. When this is inactive, GHS (No. 33) is internally connected.
23	GENH	H. synchronizing digital phase comparison input (trailing detection) Input for external synchronization, horizontal synchronization and phase adjustment. Active when EXTI is high level. When this is inactive, HD (No. 119) is internally connected.

Pin No.	Pin Name	Function	Pin No.	Pin Name	Function
24	SHS2	Shutter speed setting 2 Random shutter setting function (Refer to the specifications.)  I PU	35	VR	Vertical reset  I PU External synchronizing input by slip system. If this system is input in vertical sync. period, hard reset is activated. Input in other period stops internal counter for a period of pulse width.
25	SHS1	Shutter speed setting 1 Random shutter setting function (Refer to the specifications.)  I PU	36	HR	Horizontal reset  I PU Presets horizontal component 1T before rise of HD. Jitters in a period shorter than 140 ns are absorbed. However, operation is not secured for continuous input.
26	SHS0	Shutter speed setting 0 Random shutter setting function (Refer to the specifications.)  I PU	37	SR	System reset  I PU Inside of IC is forcibly initialized regardless of internal or external synchronization. VR and HR inputs are ineffective. Jitters in a period shorter than 140 ns are absorbed.
27	VSYN	V. sync. output  0 9 Vertical synchronizing signal of V. EQ pulse width.	38	EXTI	Internal/External synchronization setting input  I PD L : Internal synchronization H : External synchronization
28	TR2	Sync. reset mode setting  I PU For sync. reset mode setting when random shutter setting functions is activated.	39	EXTO	Internal/External synchronization setting output  0 9 L: Without CSI input After detection of no SHS, another SHS is not detected for a period of 8 fields. H: With CSI input After detection of SHS, 200 or more SHS's are detected in 1 vertical period.
29	TRG	Trigger input  I PU Trigger input to activate random shutter setting function. (Refer to the random shutter specifications.)	40	CROS	Cross ON/OFF input  I PD L: To stop cross output H: To activate cross output operation For detail, refer to supplementary specifications of respective terminals.
30	VDD	+5V power supply	41	CLIN	Cross output  0 9 To output a cross in the center of screen. For detail, refer to supplementary specifications of respective terminals.
31	GND	Ground	42	TSTE	Test terminal E  I PU Set this terminal open in general.
32	CSI	Ext. composite sync. signal input  I SH PU To input external composite synchronizing signal for horizontal and vertical separation and ext. sync. signal input detection.	43	LR	Line reset  0 9 When EXTI is external synchronization (High level), setting signal is supplied to LSW. When internal burst is ahead of external burst in phase, High level is output. When internal burst is behind external burst in phase, Low level is output (for 6 clocks of SC). Phase comparison is not operated for one field after output. For detail, refer to supplementary specifications of respective terminals.
33	GHS	Horizontal separate sync.  0 9 Horizontal separate signal of external composite synchronizing signal. 1/2 equivalent pulse is not included.			
34	GVS	Vertical separate sync.  0 9 Vertical separate signal of external composite synchronizing signal. 1/2 equivalent pulse is not included.			

Pin No.	Pin Name	Function	Pin No.	Pin Name	Function
44	EXBF	Brust flag separate output With detection of one or more H. sync pulse from CSI input, pulse whose width is for 6 cycles of subcarrier is output. For details, refer to supplementary specifications of respective terminals. 	54	TST8	Test terminal 8 Set this terminal open in general. 
45	HBSL	H. blanking reset To switch output position of IFHB (106). L: System delay 900 ns approx. H: System delay 450 ns approx. 	55	DRST	Direct reset terminal When EXTI is low level, the following operations are realized. To switch reset operation of horizontal counter for subcarrier. To reset color frame synchronizing with horizontal counter with High level; To reset color frame with Low level. 
46	TSTD	Test terminal D Set this terminal open in general. 	56	SC	Subcarrier output To monitor subcarrier signal connected internally with digital phase comparator. When phase of SC1 (68) is 0°, this output is inphase. 
47	TSTC	Test terminal C Set this terminal open in general. 	57	INSC	Internal subcarrier input Shall be connected with SC (56). Effective when EXBF is low level. Pulse rise is detected. 
48	TSTB	Test terminal B Set this terminal open in general. 	58	EXSC	External subcarrier input Effective when EXBF is low level. Pulse rise is detected. 
49	VCFM	VTR color frame Color frame for VTR exclusively. 2-field period for NTSC1, NTSC2 and PAL. 4-field period for PAL1, PAL2 and SECAM. 	59	EOS	Digital phase comparison output for subcarrier As compared with leading edge of EXSC; when internal SC has advanced phase : Low level, when internal SC has lagged phase : High level, when internal SC is in phase : High impedance. 
50	CFMI	Color frame input Effective with EXTI being low level. Used for color frame control in external synchronization. Reset to synchronizing circuit by the slip system. 	60	GND	Ground
51	CFMO	Color frame output Pulse output at the beginning of every color frame. 4-field period for NTSC1 and NTSC2. 8-field period for PAL1, PAL2, PALM and SECAM. 	61	VDD	+5V power supply
52	TSTA	Test terminal A Set this terminal open in general. 	62	FSCO	Oscillator output for subcarrier 
53	TST9	Test terminal 9 Set this terminal open in general. 	63	FSCI	Oscillator input for subcarrier 
			64	2FSC	Double subcarrier output Half-divided oscillator output for subcarrier 

Pin No.	Pin Name	Function																				
65	4SC	1/4 subcarrier output 1/4-divided output of subcarrier frequency 																				
66	2SC	1/2 subcarrier output 1/2-divided output of subcarrier frequency 																				
67	GND	Ground																				
68	SC1	Subcarrier 1 Subcarrier frequency output. Phase is changed by SCP1 and SCP2. In PAL mode, phase is not changed every H. 																				
69	SC2	Subcarrier 2 Subcarrier frequency output whose phase is 90° ahead of SC1. Phase is changed by SCP1 and SCP2. In PAL mode, phase is inverted by 180° every H. 																				
70	SCP1	Subcarrier select 1 Note: SC2 is expressed based on SC1. <table border="1" data-bbox="365 1095 724 1330"><thead><tr><th>SCP2</th><th>SCP1</th><th>SC1</th><th>SC2</th></tr></thead><tbody><tr><td>L</td><td>L</td><td>0°</td><td>90° ahead (270°)</td></tr><tr><td>L</td><td>H</td><td>90°</td><td>90° ahead (0°)</td></tr><tr><td>H</td><td>L</td><td>180°</td><td>90° ahead (90°)</td></tr><tr><td>H</td><td>H</td><td>270°</td><td>90° ahead (180°)</td></tr></tbody></table> 	SCP2	SCP1	SC1	SC2	L	L	0°	90° ahead (270°)	L	H	90°	90° ahead (0°)	H	L	180°	90° ahead (90°)	H	H	270°	90° ahead (180°)

91	GND	Ground	102	BCP1	Black clamp pulse 1  0 9 Fixes black level of CCD output signal.																		
92	TST5	Test terminal 5  I PU Set this terminal open in general.	103	BCP2	Black clamp pulse 2  0 9 Fixes black level of CCD output signal (at every H output).																		
93	TST6	Test terminal 6  I PU Set this terminal open in general.	104	OBCS	Optical black pulse select  I PU Switching of output position of horizontal BCP1 and BCP2. L: Frontward output H: Backward output																		
94	TST7	Test terminal 7  0 9 Set this terminal open in general.																					

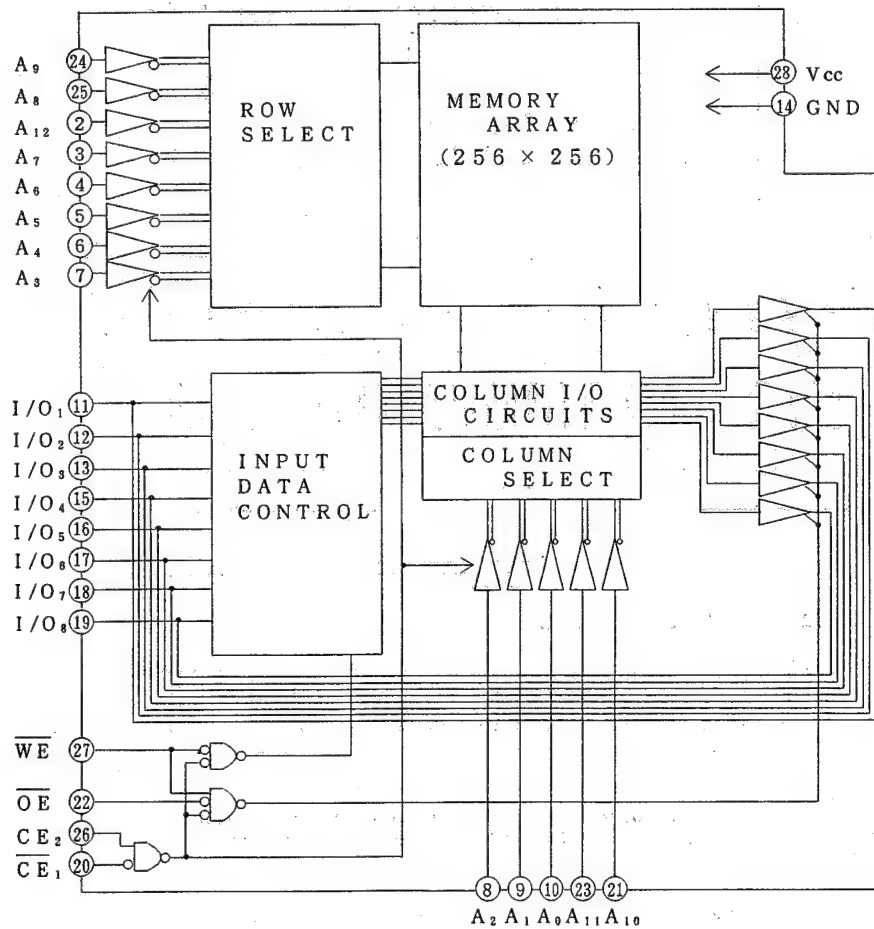

Pin No.	Pin Name	Function
105	GND	Ground
106	IFHB	Interface horizontal blanking Output pulse that is narrower than HBLK both in leading edge and trailing edge.  0 9
107	IFVS	Interface vertical synchronization Normal function: To output vertical synchronization signal having the same pulse width of V. EQ pulse. Random shutter setting function: To output the same signal as V. sync. signal in the fall-time.  0 9
108	FI	Field index Field discrimination signal. L: Field that HD and VD fall at the same time. H: Field that there is a time lag of 0.5H in falling between HD and VD.  0 9
109	VD	Vertical drive pulse Pulse output at the beginning of every field. Used as the vertical timing standard for the set.  0 9
110	DVD	Delayed vertical drive pulse Vertical drive signal that lags behind VD pulse. Controls camera's scanning timing and regulates activation time of sawtooth waveform of vertical deflection circuit.  0 9
111	CHD	Delayed horizontal drive pulse Controls camera's scanning timing. Regulates activation time of sawtooth waveform of horizontal deflection circuit.  0 9
112	GND	Ground
113	PBLK	Pre-blanking Composite blanking signal used for video processing. As compared with CBLK signal, this signal is narrower in the leading edge.  0 9
114	CBLK	Composite blanking Horizontal and vertical composite blanking signal.  0 9

Pin No.	Pin Name	Function
115	CSYN	Composite sync. Composite synchronizing signal comprising of four signals of HSYN, VSYN, EQ and SAW.  0 9
116	VBK	V. blanking Vertical blanking signal whose pulse width can be changed with VBW1 and VBW2.  0 9
117	AHBL	Pre-horizontal blanking Pulse that HBLK is advanced in breaking of leading edge.  0 9
118	HBLK	H. blanking Horizontal blanking pulse whose pulse width can be changed with HBW1 and HBW2.  0 9
119	HD	H. drive Pulse synchronized with beginning of respective lines. Used as horizontal timing standard of the set.  0 13
120	GND	Ground

60	GND	Grounding
61	VDD	+5 V power supply
62	OSCO 	Oscillator output <ul style="list-style-type: none"> Output terminal of built-in oscillation circuit

No.	Symbol	Description		
63	OSCI 	Oscillator input	• Input terminal of built-in oscillator circuit	
64	SCK 	Serial clock	• Clock input terminal for serial interface. • Reads in at the pulse rise and inputs 1/4 frequency of original oscillation or lower.	
65	SDT —	Serial data	• Data input terminal for serial interface. Input data is positive logic. • Sequential reading to start with LSB.	
66	SRD —	Reception enable signal	• Enable signal output terminal for serial interface to inform microprocessor whether it is enabled for data reception or disabled. L : Enabled for data reception H : Disabled for data reception	
67	SRMD —	Reception mode switching	• L : Reception is possible only in V. blanking period. When reception does not finish in V. blanking period : Ineffective • H : Reception is always possible.	
68	INIT —	Serial reset	• L : Disables serial interface from operation, or resets it forcibly (hard resetting). • H : Enables serial interface for original operation.	
69	FRMS —	Frame select	1-pixel or 2-pixel read-out field is selectable at a unit of frame. L : 1st and 2nd fields read-out H : 3rd and 4th fields read-out	
70	TST3 —	Test pin 3	• Should be open in general.	
71	TST4 —	Test pin 4	• Should be open in general.	
72	TST5 —	Test pin 5	• Should be open in general.	
73	TST6 —	Test pin 6	• Should be open in general.	
74	TST7 —	Test pin 7	• Should be open in general.	
75	DSMD —	Device mode	• V. transfer pulse switching terminal for 1/3-CCD or 2/3-CCD. L : Conforming to 1/3-CCD H : Conforming to 2/3-CCD	
76	WEN 	Write enable	• Timing pulse output to write data in external memory at slow shutter speed.	
77	CLKO 	Clock output	• Half divided output of oscillation frequency	
78	RSMD —	Switching of H. output reset pulse polarity	• To switch output polarity of RO (No. 54). L : Positive H : Negative	
79	LUX 1 —	Low lux mode	• Low lux setting terminal L : Normal mode H : Low lux mode Refer to the low lux mode table.	
80	VDD	+5 V power supply

SECTION 5

ELECTRICAL PARTS LIST

SAFETY PRECAUTION:

Parts identified by the \triangle symbol are critical for safety. Replace only with specified parts numbers.
For maximum reliability and performance, all other replacement parts should be identical to those specified.

NOTE:

- Parts not denoted by parts numbers are not supplied by JVC.
- Abbreviations in this list are as follows:

RESISTORS

In the "Description" column:

- All resistance values are in ohms (Ω).
- K expresses kilo-ohm (1 000 ohms, $k\Omega$).
- M expresses mega-ohm (10^6 ohms, $M\Omega$).

In the "Parts Name" column:

- COMP. RESISTOR : Composition Resistor
- U.F. RESISTOR : Non-inflammable Resistor
- O.M.F. RESISTOR : Oxide Metalized Film Resistor
- FUSI. RESISTOR : Fusible Resistor
- M.P. RESISTOR : Metal Plate Resistor
- M.G. RESISTOR : Metal Graze Resistor
- M.F. RESISTOR : Metal Film Resistor
- W.W. RESISTOR : Wire Wound Resistor

CAPACITORS

In the "Description" column:

- All capacitance values are in microfarad (μF) unless otherwise indicated.
- P expresses picofarad (10^{-12} farad, pF).

In the "Parts Name" column:

- TRIM. CAPACITOR : Trimmer Capacitor
- CER. CAPACITOR : Ceramic Capacitor
- E. CAPACITOR : Electrolytic Capacitor
- TAN. CAPACITOR : Tantalum Capacitor
- MPP CAPACITOR : Metalized Polypropylene Capacitor
- O.F. CAPACITOR : Oil Film Capacitor
- MPF CAPACITOR : Metalized Polyfilm Capacitor
- F.M. CAPACITOR : Film Mica Capacitor
- P.P. CAPACITOR : Polypropylene Capacitor
- P.S. CAPACITOR : Polystyrene Capacitor
